### **DETAILED ACTION**

## **Drawings**

1. The drawings were received on 7/16/04. These drawings are acceptable.

# Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 3. Claims 1, 5-7, 11, and 12 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's admitted prior art for the same reasons as set forth in Section 5 of the last office action, dated 3/10/04.

Applicant's admitted prior art, in Figure 2, discloses the same system and method for automatically detecting scene changes within a digital video sequence including a succession of frames as specified in claims 1, 5-7, 11, and 12, comprising computing metrics for each of a plurality of frames (y) from a digital video sequence, the metric of a frame being a measure of distance between the frame and a given frame (e.g. AB and CD); identifying a candidate frame (e.g. right short segment) for which the metric of the candidate frame differs from the metric of the predecessor frame (y) to the candidate frame, by at least a first threshold; determining whether the metrics of successive ones of each of a first plurality of frames 215, successively following the candidate frame, differ from one another by less than a second threshold; and further

Application/Control Number: 09/675,358

Art Unit: 2613

determining whether the metrics of each frame of a second plurality of frames (y), successively preceding the candidate frame, are larger than a third threshold.

With respect to claims 5 and 11, Applicant's admitted prior art also discloses marking the candidate frame 220 as a scene change frame, when the determining determines that the metrics of successive ones of each of the first plurality of frames (y) differ from one another by less than the second threshold (e.g. CD), and when the further determining determines that the metrics of each frame of the second plurality of frames are larger than the third threshold.

With respect to claims 6 and 12, Applicant's admitted prior art also discloses the marking does not mark the candidate frame as a scene change frame if a frame (x) preceding the candidate frame is substantially similar to the current frame (y).

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 2-4 and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art in view of Gargi et al (Performance Characterization of Video-Shot-Change Detection Methods) for the same reasons as set forth in Section 7 of the last office action, dated 3/10/04.

It is noted Applicant's admitted prior art differs from the present invention in that it fails to particularly disclose using color histograms for measuring distances as specified

Application/Control Number: 09/675,358

Art Unit: 2613

in claims 2-4 and 8-10. Gargi et al however, in Section IV, teaches the concept of such well known measure of distance based on color histograms of frames wherein the measure of difference is a sum of absolute values (Eq. 1) and sum of squares (Eq. 2) of differences of histogram frequencies.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made, having both the references of Applicant's admitted prior art and Gargi et al before him/her, to exploit the common frame difference measuring techniques as taught by Gargi et al in the scene change detection system of Applicant's admitted prior art, in order to obtain the best scene detection performance at a moderate computational cost.

## Response to Arguments

6. Applicant's arguments filed 7/16/04 have been fully considered but they are not persuasive. Applicant asserts on page 7 of the Remarks that the newly amended Figure 2 would render APA as an invalid reference. However, it is submitted that the old segment (i.e. the second short segment), although no longer labeled with a numeral, is still a scene change. In that sense, APA is determining the metrics of frames (i.e. y within width AB) successively preceding it, thus meeting the claimed invention.

### Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2613

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Y. Lee whose telephone number is (703) 308-7584. The examiner can normally be reached on (703) 308-7584.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on (703) 305-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
